DAMPENED BAR MOUNTS

MSC
MOTO

**INTRODUCING OUR ALL NEW ANTI-VIBRATION
BAR MOUNTS TO THE MSC PRODUCT LINE-UP!**

ANTI-VIBRATION // ANTI-TWIST // AUSTRALIAN MADE

Maintaining our commitment to constantly improving our customers performance, safety and overall riding experience, MSC Moto is proud to expand our product range with the development of our new Apex Dampened Handlebar Mount!

Thanks to years of rigorous testing and development in the harsh conditions that come with off-road riding and racing, MSC's all-new Apex Dampened Handlebar Mount not only reduces vibration and aids in eliminating arm pump, but also eliminates twisting in the event of an accident.

APEX DAMPENED HANDLEBAR MOUNTS

Featuring the use of 8 vacuum cast polyurethane design dampers positioned concentrically with the 4 handlebar clamp bolts, the APEX Bar Mounts vastly reduce the amount of vibration received through the engine and chassis while also eliminating twisting in the event of an accident.

Currently available for European offroad, adventure and road motorcycles that have a M10 thread for bar mounting on the top triple clamp. More models coming soon for Japanese bikes.

All stainless steel hardware and dampers are included in the APEX kit, spare parts available separately.

FEATURES AND DETAILS

Lightweight without sacrificing strength due to compact construction (503g Per Set)

Mount Height - 40mm to centerline of handlebar

Hardware - All stainless steel fasteners

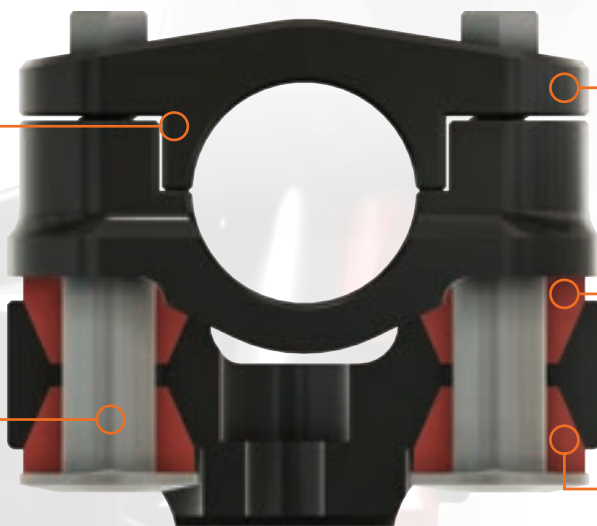

Australian made with CNC machined billet aluminium

Polyurethane resin dampers prevent twisting and vastly reduce vibration & arm pump

Softer option polyurethane dampers available separately for riders wanting more damping

COMPATIBLE WITH MSC STEERING DAMPER KITS

Mount brackets available to convert your current AXIS or VectorMX steering damper kit to a rubber mount system to create the ultimate fusion of control and comfort for your machine! Available for DownUnder and TopMount.
